PRICE'S LAWN GRASS

The best time to start your lawn, or to repair it, is during the cool weather of early Spring or in early Fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. On new lawns, use 1 lb. for every 300 square feet, 5 lbs. for 1500 square feet, 135 to 150 lbs. for one acre. To replenish lawns where turf is thin, use half quantity.

Price's SPECIAL Lawn Seed

Lb. \$1.50 5 lbs. \$7.00 25 lbs. \$32.50 50 lbs. \$60.00

This mixture is especially prepared from the highest quality seeds that can be produced. It makes a smooth, green, velvety lawn with a thick bottom, free from clumps. Only the very best fine-leaved and deep-rooted varieties of the most suitable grasses for making an even, thick mass of sod are used in this mixture. Sure to produce the best results under average conditions of soil and climate.

Price's 'Capitol Park' Formula

Lb. \$1.25 5 lbs. \$5.75 25 lbs. \$26.25 50 lbs. \$47.50

This mixture is composed of fine, re-cleaned grasses and white clover, carefully proportioned so that they succeed one another throughout the Summer. Where low cost and quality is important we have prepared this mixture to meet your budget.

Price's Dense Shade Formula

Lb. \$1.65 5 lbs. \$7.95 25 lbs. \$37.50 50 lbs. \$70.00

An exceptional formula which is particularly adapted to heavily shaded areas and will also do well in lighter shade. We have spared no care or expense to make this lawn seed the best obtainable for the purpose. Does not contain clover.

Merion Blue Grass Formula

100% Perennial Grasses Lb. \$1.89

STRAIGHT MERION BLUE GRASS Lb. \$2.10

Produces thicker turf, stays greener all Summer and stands closest mowing. One pound covers 750 square feet, three times as much as standard Blue Grass, costing no more to sow an equal area.

SEPARATE VARIETIES OF GRASSES MOST SUITABLE FOR LAWNS

WHITE DUTCH CLOVER. Gardeners who prefer an extra heavy growth of clover in their lawn should add this at the rate of 4 ozs. to every 2 lbs. of grass seed.

¼ lb. 50c., ½ lb. 85c., 1 lb. \$1.50

WILD WHITE CLOVER. This is the ideal clover for lawns. When kept cut, it shows hardly any blossoms and its low creeping habit of growth means that your lawn will remain green all Summer.

½ lb. \$1.00, 1 lb. \$1.85

FANCY KENTUCKY BLUE GRASS. An ideal lawn grass, slightly creeping in habit, fine texture and permanent, improves each year. Prefers retentive, strong soils with moisture.

1 lb. 95c., 10 lbs. \$9.00

FANCY RED TOP. A fine perennial grass with slightly creeping habits of growth. Stands hot weather and hard usage. Fills in well with Blue Grass.

Lb. \$1.00, 10 lbs. \$9.50

CHEWING FESCUE. A New Zealand grown strain of red or creeping fescue. A creeping rooted grass resisting extreme drought and especially adapted for forming close and lasting turf in shady places.

Lb. 80c., 10 lbs. \$7.50

CREeping RED FESCUE. It spreads from the roots, making a dense turf which tends to crowd out weeds. Does well in shade and is good on sandy soil.

Lb. 80c., 10 lbs. \$7.50

PENNLAWN FESCUE. Developed at Penn. Agricultural Experiment Sta. Tolerates dry soil in either shade or sun. Withstands close mowing. Creeping habit.

Lb. 90c., 5 lbs. \$4.25

ASTORIA BENT. Makes excellent fine turf on moist soils. Lasts indefinitely under close mowing. Semi-creeping habit.

Lb. \$1.25, 10 lbs. \$11.50

SEASIDE BENT (Certified). Suitable for putting greens.

Lb. \$2.25

PERENNIAL RYE GRASS (English). Useful on sloped and other difficult places to protect slower germinating seeds. Bright, shiny green, rank growing, hard to cut and very persistent.

Lb. 35c., 10 lbs. \$3.20

RYE GRASS (Domestic). Excellent where a nurse grass is wanted as it will make a quick covering of bright green grass on new lawns and protect the slower germinating permanent kinds. It makes a good growth in a few weeks but will not make a permanent sod. (Annual)

Lb. 30c., 10 lbs. \$2.50

TIMOTHY. Extra re-cleaned and high germinating. Free from weeds.

Lb. 35c., 10 lbs. \$3.20

GENERAL INFORMATION AND TERMS OF SALE

WRITE OR PHONE US FOR ANY ITEM NOT LISTED IN THIS CATALOG. WE CARRY MANY ITEMS THAT WE COULD NOT LIST. ASK US ABOUT THEM FIRST.

Our list of varieties includes the choicest strains of all the best standard sorts but we recommend making thorough trials of our many new varieties because they have proved superior in many sections. Higher yields, better quality and disease resistance are important factors that distinguish many of the newer varieties.

Our seeds are all tested for germination and the results of these tests are shown on each package. If interested in knowing germination before buying, write us.

The number of days indicated to produce vegetables ready for table use will, of course, vary from year to year, depending on seasonal conditions. Size and quality are also influenced, although probably to a less extent, by conditions of growth and geographical location. The data given is based on average performance rather than on behavior under the most favorable conditions.

Price's Seed Store, Inc., warrants to the extent of the purchase price that seeds and bulbs sold are as described on the container within recognized tolerances. Seller gives no other or further warranty, expressed or implied. We will not fill, or accept, orders under any other conditions.

Scott's New Rose Program

After 8 years of research, the Scott's lawn seed people have developed a way so you can get more nearly continuous bloom, larger blooms from your rose bushes.

You do this, with Scott's help, by overcoming the usual cause of disappointment which is that by mid-summer home rose bushes are carrying only one-third the foliage needed for abundant bloom.

Effective protection from insects and diseases requires two things: 1) the right chemical, and 2) a way to easily and properly apply it to your bushes.

The first need is answered by Scott's research in a brand new product called HAZE. The second with the unique, always-ready-to-use applicator called the Scott's ZEPHYR.

You take care of the nutritional needs of your roses by direct soil application of DAWN.

As you leisurely walk past the bushes and turn the crank of the ZEPHYR at a comfortable speed, you direct the deflector at the base of each plant. This sends up a dry mist of HAZE that envelops both surfaces of every leaf with the protective film. Nothing to mix, measure or spill — or mess up your clothes.

You do this once a week during the season to protect the new growth needed for new bloom and with the ZEPHYR you make precision application, without wasteful, ugly globs.

NEW APPLICATOR — THE KEY TO SUCCESS WITH ROSES SCOTT'S ZEPHYR
